

22° HALO

A 22° Halo is an optical light effect in the form of a ring with a radius of approximately 22° around the sun or the moon. LMF's correspondent band brings the soundtrack to this phenomenon on stage. Now, how does this sound? The quartet fuses space, groove and melody skillfully together. Méan's sensible piano-spheres merge wondrously with Fries' luscious voice. She owns a sure instinct for rhythm, lyrics and phrasing and navigates lightly through the music. Liechti on the drums roots the hole band cosmos, and creates space for Traxel's flying basslines. The impulses for the improvisations, interpretations and the compositions are coming from all four of them. And that's exactly the reason why this band floats so mysteriously through space and time. These musicians are all rooted in jazz tradition, but now as a band striking out on new paths - just like the on ice crystals refracted light.

Lea Maria Fries - Compositions, Lyrics, Vocals

Marc Méan - Piano

Lukas Traxel - Doublebass

Valentin Liechti - Drums
